Hobbies

Web :

I'm a real passionate with every kind of web technologies, my favorite technologies are frontend languages such as HTML, CSS and Javascript. I got a basic knowledge with Backend technologies, I worked a lot with php by the past, and today, I'm working with Ruby & Rails in my current company.
I'am really interested into javascript, since it's a must have, and I'm a jquery aficionado, I have a basic knowledge in Javascript frameworks (emberjs, angular.. ect).
I'm in love with clean & minimal interfaces, and I love to create new user experience concepts.
I also love to play with codes, I feel like I'm an inventor, and I always try to go beyond the limits, and to push my experiments at the maximum, sometimes its totally useless and crazy, but it helps me to discover new things and to increase my skills. I love to learn, and I'm learning everyday.
You can visit my codepen profile to see my experiments & explorations. And feel free to follow my links to discover my own universe.
